Provide Database Server Credentials which the wizard can use to create the database, then click Next. These credentials are independent from the credentials the infrastructure service uses to connect to the database after it is created. They are not stored. The option Use integrated connection is selected by default. It allows the wizard to use the Windows account of the identity it is running under to connect to SQL and create the database.

The first step in designing a database is deciding which aspects of the system are important enough to include in the model. Treat each aspect as an object and create a list of all the objects you can think of. At this stage, don't try to decide how these objects relate to each other. Just try to list them all.

### How to Design a SQL Database - dummies

Providing a stable environment for your developers is another important consideration when designing an infrastructure. As mentioned previously, one way to implement a development environment is to share the staging server resources—for example, setting up separate development virtual hosts and databases on the same servers used for staging.
