Scaling definition, the removal of calculus and other deposits on the teeth by means of instruments. See more.

Scaling | Definition of Scaling at Dictionary.com

In Euclidean geometry, uniform scaling (or isotropic scaling) is a linear transformation that enlarges (increases) or shrinks (diminishes) objects by a scale factor that is the same in all directions. The result of uniform scaling is similar (in the geometric sense) to the original. A scale factor of 1 is normally allowed, so that congruent shapes are also classed as similar.
